

Adjusting τ to customize the operation cadence constraint

$$\mathbf{b} = \mathbf{1} + \frac{1}{\tau} \begin{bmatrix} E_{S_1,t}^2 & E_{S_1}^1 \\ E_{S_2,t}^2 & E_{S_2}^1 \\ \vdots & \\ E_{S_p,t}^2 & E_{S_p}^1 \end{bmatrix} \mathbf{t} \quad \Rightarrow \quad \mathbf{b}' = \mathbf{1} + \begin{bmatrix} \frac{1}{\tau_{S_1}} & 0 & \cdots & 0 \\ 0 & \frac{1}{\tau_{S_2}} & \cdots & 0 \\ \vdots & \vdots & \ddots & \\ 0 & 0 & & \frac{1}{\tau_{S_p}} \end{bmatrix} \begin{bmatrix} E_{S_1,t}^2 & E_{S_1}^1 \\ E_{S_2,t}^2 & E_{S_2}^1 \\ \vdots & \\ E_{S_p,t}^2 & E_{S_p}^1 \end{bmatrix} \mathbf{t}$$
